## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1 and 17-22 are allowed.

The following is an examiner's statement of reasons for allowance: the closest prior art of record, Kubo et al. (5,375,924), does not teach or render obvious a method for detecting a heightened risk of the onset of fire of an electrical component comprising the steps of sampling the atmosphere around the component using an ion mobility spectrometer and detecting a change in the ion mobility spectrum that is characteristic of overheating of the component. Applicant's arguments filed on 7/6/04 are persuasive (See page 3, paragraph 1 - page 4, paragraph 3).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
